

Bussole e accessori

Sleeves and accessories

BUSSOLE ED ACCESSORI

BUSSOLE DI TRAZIONE

Utilizzate per il bloccaggio dei cuscinetti a foro conico sugli alberi cilindrici (**Fig. 1**), hanno forma tronco conica e sono tagliate longitudinalmente per adattarsi alle dimensioni del foro dei cuscinetti (conicità 1:12).

Vengono fornite complete di ghiera e rosette (**Fig. 2**), sono le più comuni ed utilizzate, semplificano montaggio e smontaggio dei cuscinetti e la progettazione delle macchine. Permettono tolleranze più abbondanti tra albero e cuscinetto.

BUSSOLE DI PRESSIONE

Utilizzate per il bloccaggio dei cuscinetti a foro conico sugli alberi cilindrici (**Fig. 3**), hanno forma tronco conica e sono tagliate longitudinalmente per adattarsi alle dimensioni del foro dei cuscinetti (conicità 1:12).

Sono meno comuni perché più difficili da montare, non vengono fornite con ghiera di smontaggio (**Fig. 4**).

SLEEVES AND ACCESSORIES

ADAPTER SLEEVES

Adapter sleeves are used to lock bearings with tapered bore on cylindrical shafts (**Fig. 1**), they have a tapered stem shape and are cut lengthwise to adapt to the dimensions of the bearing's bore (taper 1:12).

They are supplied complete with lock nuts and washers (**Fig. 2**) are the most common type used and simplify the assembly and disassembly of the bearings and the design of the machines. They allow for greater tolerances between shaft and bearing.

WITHDRAWAL SLEEVES

They are used to lock bearings with tapered bore on cylindrical shafts (**Fig. 3**), they have a tapered stem shape and are cut lengthwise to adapt to the dimensions of the bearings' bore (taper 1:12).

They are less popular because they are more difficult to assemble, are not supplied complete with disassembly lock nuts (**Fig. 4**).

I cuscinetti montati su bussole di pressione devono essere appoggiati ad uno spallamento fisso ricavato sull'albero, la bussola viene inserita in seguito e pressata dentro il foro conico del cuscinetto.

GHIERE

ISB® fornisce diversi tipi di ghiera: di bloccaggio o di estrazione in base al loro utilizzo. Due sono gli impieghi che possono avere questi accessori per cuscinetti, uno è il bloccaggio sull'albero, che può avvenire in modi diversi, l'altro è facilitare il montaggio/smontaggio del cuscinetto sull'albero. Le ghiera ISB® offrono tre modi di bloccaggio sull'albero, come sotto riportato.

ROSETTA DI SICUREZZA

Si utilizzano con le serie di ghiera KM e KML. Sono elementi di bloccaggio semplici, stabili ed affidabili (Fig. 5).

Bearings fitted on withdrawal sleeves must rest against a fixed shoulder on the shaft and the sleeve is fitted subsequently and pressed into the tapered bore of the bearing.

LOCK NUTS

ISB® supplies different types of locking or extraction lock nuts based on what they are to be used for. These accessories for bearings may have two uses: one for locking on the shaft, which may be done differently and one for facilitating assembly/disassembly of the bearing on/from the shaft. ISB® lock nuts offer three different ways of locking on the shaft, as follows.

LOCKING SAFETY WASHER

They are used with lock nut series KM and KML. They are simple, stable and reliable locking elements (Fig. 5).

GRAFFA DI FERMO O PIASTRA

Si assembla sulla ghiera, tipo HM, grazie ad una vite che tiene fissato il piastrino inserito in un intaglio della ghiera ed in una scanalatura sull'albero. Appellativo MS (Fig. 6).

LOCKING CLIP OR PLATE

Are assembled into the lock nuts, HM type, by a screw that fix a plate in a slot in the nut and into a groove on the shaft. Designation MS (Fig. 6).

GHIERA AUTOBLOCCANTE

La ghiera è dotata di un anello interno di Nylon che all'avvitamento genera frizione, a contatto col filetto maschio generando una forza bloccante. Le ghiera autobloccanti hanno come prefisso nell'appellativo GTN e GTP (Fig. 7).

SELF-LOCKING NUT

The lock nut has an internal Nylon ring that generates friction whilst screwing it, in contact with the male thread, generating a locking force. The self-locking nuts have GTN and GTP designation suffix (Fig. 7).

GHIERE DI PRECISIONE

Il montaggio di viti a sfere o cuscinetti usualmente con ghiera tradizionali, a causa della perpendicolarità tra filettature e superficie di battuta, genera dei problemi di precisione. **ISB®** ha sviluppato delle serie di ghiera con caratteristiche di tolleranza di precisione, di perpendicolarità tra filettature e piano frontale e di tolleranza delle filettature che risolvono questi problemi in modo definitivo.

GHIERE YSF BLOCCAGGIO SUL FIANCO

Il sistema di bloccaggio è dato da 3 grani di fissaggio equidistanti ed inclinati di 30° (**Fig. 8**).

- Perpendicolarità tra filettatura e piano frontale: 0.002 mm
- Materiale: SCM4
- Durezza: HRC 28 – 32
- Tolleranza della filettatura: ISO 4H

PRECISION LOCK NUTS

The assembly of ball screws or bearings usually with conventional lock nuts, due to the perpendicularity between the threads and the contact surfaces, generates precision problems. **ISB®** has developed some series of lock nuts with characteristics of precision tolerance, perpendicularity between threads and front surface and tolerance of the threads that resolve these problems once and for all.

YSF LOCK NUTS FOR SIDE LOCKING

The locking system has 3 equally distant locking grub screws, set at an angle of 30° (**Fig. 8**).

- Perpendicularity between thread and front surface: 0.002 mm
- Material: SCM4
- Hardness: HRC 28 – 32
- Thread tolerance: ISO 4H

GHIERE YSA BLOCCAGGIO ASSIALE

Il sistema di bloccaggio è dato da tre grani di fissaggio equidistanti. L'utilizzo di questa tipologia di ghiera è indicata per ridotti spazi di montaggio (**Fig. 9**).

- Perpendicolarità tra filettatura e piano frontale: 0.002 mm
- Materiale: SCM4
- Durezza: HRC 28 – 32
- Tolleranza della filettatura: ISO 4H

YSA LOCK NUTS FOR AXIAL LOCKING

The locking system has three equally distant locking grub screws. This type of lock nut is suitable for tight assembly spaces (**Fig. 9**).

- Perpendicularity between thread and front surface: 0.002 mm
- Material: SCM4
- Hardness: HRC 28 – 32
- Thread tolerance: ISO 4H

GHIERE YSR BLOCCAGGIO RADIALE

Il sistema di bloccaggio radiale è dato da tre grani di fissaggio equidistanti. Questa tipologia di ghiera ha una larghezza ridotta ed è indicata per montaggi su ristretta larghezze di filetto (**Fig. 10**).

- Perpendicolarità tra filettatura e piano frontale: 0.002 mm
- Materiale: SCM4
- Durezza: HRC 28 – 32
- Tolleranza della filettatura: ISO 4H

YSR LOCK NUTS FOR RADIAL LOCKING

*This radial locking system has three equally distant locking grub screws. This type of lock nut is not as wide and it suitable for assembly on restricted thread width (**Fig. 10**).*

- *Perpendicularity between thread and front surface: 0.002 mm*
- *Material: SCM4*
- *Hardness: HRC 28 – 32*
- *Thread tolerance: ISO 4H*

GHIERE YSK BLOCCAGGIO AD INTAGLIO ELASTICO

Il sistema di bloccaggio è dato dall'intaglio e dalla elasticità dell'acciaio; serrando le viti di fissaggio, l'attrito generato ne permette il bloccaggio. Indicata per impieghi pesanti grazie alla sua capacità di bloccaggio, tolleranze meno precise e facilità di montaggio (**Fig. 11**).

- Perpendicolarità tra filettatura e piano frontale: 0.01 mm
- Materiale: SCM4
- Durezza: HRC 26 – 30
- Tolleranza della filettatura: ISO 6H

YSK LOCK NUTS WITH ELASTIC SLOT

*The locking system is obtained by the slot and the elasticity of the steel material; when you tighten the locking screws, they are locked by the friction generated. They are suitable for heavy-duty usage thanks to the locking capacity, less precise tolerances and ease of assembly (**Fig. 11**).*

- *Perpendicularity between thread and front surface: 0.01 mm*
- *Material: SCM4*
- *Hardness: HRC 26 – 30*
- *Thread tolerance: ISO 6H*
